        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

EMBO J. 12.4013.4019(1993).

-i- CATALYTIC ACTIVITY: ATP + L-tryptophan + trna(Trp) = AMP + diphosphate + L-tryptophanyl-trna(Trp).

-i- SUBUNIT: HOMODIMER (BY SIMILARITY).

-i- SUBUNIT: BELONGS TO CLASS-I AMINOACYL-TRNA SYNTHETASE FAMILY.

-i- SIMILARITY: CONTAINS 1 WHEP-TRS DOMAIN.

It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation - the European Bioinformatics Institute. There are no restrictions on its
                                                                                                                                                                                                                                                                                                                                                                                                                           -!- ALTERNATIVE PRODUCTS: 2 isoforms; a long form (shown here) and a short form; are produced by alternative splicing.
-!- TISSUE SPECIFICITY: The short isoform is widely expressed, the long form is found only in embryonic stem cells.
-!- SIMILARITY: BELONGS TO CLASS-I AMINOACYL-TRNA SYNTHETASE FAMILY.
-!- SIMILARITY: CONTAINS 1 WHEP-TRS DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pajot B., Sarger C., Bonnet J., Garret M.;

DNA Res. 8:123-140 (2001).
-!- CATALYTIC ACTIVITY: ATP + L-tryptophan + tRNA(Trp) = AMP + diphosphate + L-tryptophanyl-rRNA(Trp).
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SIMILARITY: BELONGS TO CLASS-I AMINOACYL-TRNA SYNTHETASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            STRAIN=JCM 10545 / 7;
